BENEDICTA ENYONAM RUBSON

rubson.eny@gmail.com | +44 7958170818 | London, UK | linkedin.com/in/benedicta-rubsonnn | github.com/brerubson

SUMMARY

Data and business analytics professional with an MSc in AI for Business Intelligence and an engineering background. Experienced in applying data analytics to business performance, financial analysis, and operational challenges. Skilled in SQL, Python, Power BI, and Excel, with a proven ability to translate complex data into actionable insights that inform strategic decision-making, assess risk, and identify business growth opportunities.

SKILLS

Languages: Python, SQL

Data & Analytics: Data Cleaning, Data Modelling, Exploratory Data Analysis, Statistical Analysis, Data Mining, Feature Engineering, Machine Learning

BI & Tools: Power BI, Power Query, Excel, GitHub, Dashboard Development

Finance & Risk: Financial Modelling, Portfolio Optimisation, Risk Analysis, Cost Estimation

Business Analytics: Business Analysis, Business Reporting, Root-Cause Analysis, Scenario & Sensitivity Analysis, RFM Analysis

Soft Skills: Stakeholder Communication, Project Management, Adaptability, Problem Solving

PROFESSIONAL EXPERIENCE

Analyst and Quality Assurance Consultant, *Practera* London, UK | Feb 2026 – Feb 2026

- Co-led a root-cause analysis of an operational quality-control problem for a client, applying structured analytical frameworks to turn the findings into data-driven recommendations.
- Independently researched and compared AI and NLP solutions for controlling the quality of incoming project briefs while keeping some human input in the client's workflow.
- Compiled a comparative analysis that informed the client's approach.
- Owned and moderated the client-facing consulting presentation from start to finish, delivering findings and recommendations clearly enough for a senior non-technical audience to act on.

Project Analyst, *Power Consult* Accra, Ghana | Jan 2024 – Nov 2024

- Analysed project cost and scheduling data and presented the results in clear stakeholder visuals and evidence based reports, contributing directly to two successful major construction bids.
- Built dashboards and analytical reports that turned complex project data into actionable insights, helping the team make decisions faster and with greater confidence.
- Tracked project cost and schedule against budget and flagged variances to the team

Engineering Data Analyst, *Capitol Engineering Ltd.* Accra, Ghana | Oct 2022 – Dec 2023

- Carried out site investigations and data analysis across three major building projects, validating material quantities through rigorous data checks to deliver fully accurate figures.
- Supported tender preparation and bills of quantities using cost estimation and statistical analysis, helping the team submit accurate and competitive bids.

Engineering Data Analyst, *Volta River Authority* Accra, Ghana | Jul 2021 – Aug 2022

- Analysed reservoir and hydrological data to support flood risk assessments and turned the findings into structured recommendations for infrastructure risk management.
- Automated project tracking and reporting processes, improving reporting efficiency by about 15%.
- Produced performance reports that gave senior stakeholders clear oversight of long term infrastructure programmes.

PROJECTS

Customer Recovery & £10m Expansion Analysis Aug 2026 – Sep 2026

- Tested whether a simulated UK lifestyle brand's recovery from its 2023 downturn was genuine and whether a £10m expansion was justified. Revenue had returned to 97% of its 2022 peak. However, the repeat purchase rate was still down from 91.9% to 87.5%.
- Defined the KPIs used to judge the recovery (revenue against the 2022 peak, repeat purchase rate) and documented the assumptions behind each scenario.
- Checked data quality before analysis, covering duplicates, missing values and inconsistent records in SQL.
- Segmented customers using RFM analysis in Python and found that customers buying across more product ecosystems are worth up to 17x more, the strongest evidence behind the expansion case.
- Built a three scenario financial model in Excel. As none of the scenarios repaid the £10m within three years on operating profit alone, the recommendation was to secure a larger margin contribution or a strategic case before proceeding.
- Delivered a four page Power BI dashboard, using DAX measures, covering recovery, customer segments, product performance and the £10m investment case.

Tech: SQL, Python, pandas, NumPy, Excel, Power BI, DAX, RFM Analysis, Matplotlib Scenario Modelling

UK Retail Financial Performance Analysis Jul 2026 – Jul 2026

- Conducted a seven year comparative P&L analysis (FY2020 to FY2026) of M&S, Next, Primark and JD Sports, covering the COVID period, the 2022 inflation shock and the recovery that followed.

- Sourced Revenue, Gross Profit, Operating Profit and Net Profit for all four companies and cross verified every figure against statutory accounts and RNS filings.
- Cleaned and transformed the data in Power Query, built the data model in Power BI and wrote seven DAX measures to compare four retailers on different fiscal calendars without forcing a false year on year alignment.
- Designed a five visual dashboard (matrix, seven year trend, margin comparisons, YoY growth) that reports each company against its own true reporting year and excludes ABF (Primark's parent) from disclosures it does not publish.
- Found that Next's operating margin (20%) is nearly double its nearest competitor despite the smallest revenue base of the four and that M&S's headline +25% FY2026 growth is largely due to the Ocado Retail consolidation (+1.9% like for like).

Tech: Power BI, Power Query, DAX, Financial Statement Analysis, Data Modelling

PortfolioPilot: Investment Portfolio Simulation Platform Feb 2026 – May 2026

- Built a portfolio optimisation platform on five years of real FTSE 100 and FTSE 250 data, implementing five portfolio optimisation models (Equal Weight, Mean Variance, Max Sharpe, Min Variance, Black Litterman). The best, Max Sharpe Buy and Hold, achieved a Sharpe ratio of 1.53, a 30.8% annual return and alpha of +22.5% against the FTSE 100.
- Developed three machine learning forecasting models (Prophet, GRU, Random Forest) to generate 30 day trading signals. Prophet reached 61.6% directional accuracy on unseen January 2026 data.
- Built a Monte Carlo engine that simulates 500 portfolio paths across six market scenarios over horizons from 30 days to five years and delivered it through a six page interactive Streamlit dashboard.

Tech: Python, pandas, NumPy, scikit-learn, Streamlit, Prophet, PyTorch, SciPy, GRU, Random Forest, Monte Carlo Simulation, Portfolio Optimisation, Black-Litterman, Plotly

Satellite Ship Detection using Convolutional Neural Networks Jun 2025 – Jul 2025

- Led a team project building a CNN based computer vision solution to detect ships in satellite imagery, managed delivery end to end and presented the findings to a technical panel.

Tech: Python, PyTorch, NumPy, CNNs, Computer Vision, Deep Learning, Satellite Imagery

Data Mining and Predictive Modelling Jun 2025 – Jun 2025

- Built a multivariate predictive model in Python to forecast NASDAQ stock returns, applying data mining, feature engineering and decision tree optimisation.
- Reported precision, recall and accuracy. If you have the actual figures, this bullet is much stronger with them.

Tech: Excel, Python, Data Mining, Feature Engineering, Decision Trees, Predictive Modelling

Community Water Service Analysis May 2021 – Jul 2021

- Conducted field research and data analysis on community water service delivery and wrote a structured report with findings and recommendations for improving the service.

Tech: Excel, PivotTables, Field Data Collection

EDUCATION

MSc AI for Business Intelligence, *University of Leicester* Jan 2025 – Jul 2026
Modules: Data Mining and Neural Networks, Computational Intelligence and Software Engineering, Practical Programming, Fundamental Data Analytics, AI for Space, International Business

BSc Civil Engineering, Sep 2017 – Aug 2021
Kwame Nkrumah University of Science and Technology
Modules: Systems Engineering, Construction Management, Environmental Quality Engineering, Hydraulics Engineering, Development Engineering

LEADERSHIP & EXTRACURRICULARS

Course Representative, *University of Leicester* Feb 2025 – Jul 2025
Analysed student feedback, presented structured recommendations to faculty and maintained clear communication between students and academic staff.

Peer Tutor, *University of Leicester* Feb 2025 – Jul 2025
Supported six students with Statistics and Data Mining coursework, giving structured guidance that helped improve their academic performance.
